EDUCATION

The University of British Columbia
B.Sc. Computer Science, Option in Software Engineering

Expected Grad: May 2027
Dean's Honour List

EXPERIENCE

Agile Developer Intern May 2025 – Apr 2026
SAP Vancouver, BC

- Debugged and fixed critical React + TypeScript bugs affecting 10k+ enterprise users of SAP Analytics Cloud.
- Developed JavaScript helper APIs used internally to automate widget creation, modification, and data processing workflows; integrated into Jenkins CI/CD and executed on hundreds of pull requests daily.
- Achieved 98% automation test coverage of data blending, reducing manual QA regression workload by 75%.
- Led migration of 50+ blending, export, and image widget Jasmine test suites from HANA2 (XS Classic) to XS Node runtime, aligning automation with customer systems and preventing production failures.

Software Engineer Intern Jan 2025 – Apr 2025
Chen's Group Toronto, ON (Remote)

- Migrated a React Native mobile app (TOConnect) from Supabase to a Django and MongoDB backend with 35 REST APIs, reducing cloud overhead costs by 75% and improving backend scalability by 3x.
- Designed and implemented a secure authentication system using RSA-signed JSON Web Tokens for 2,000+ users, replacing Supabase authentication logic and enabling custom token regeneration and configurable timeouts.
- Dockerized Python backend, reducing Windows environment setup time from 2 hours to 15 minutes, enabling Mac developers to work on their local machines, and preparing the newly built backend for deployment.

Data Structures and Algorithms Teaching Assistant Jan 2025 – Apr 2025
University of British Columbia Vancouver, BC

- Led student labs, explained advanced data structures, and mentored students via Piazza and office hours.

Lead Coding Instructor and Franchise Manager Jul 2021 – Sep 2023
Code Ninjas (Multiple Locations) Vancouver, BC

- Drove franchise growth from 1 to 10 locations in two years by spearheading staffing, training, and operations.
- Developed and delivered curriculum to teach over 1000 students Python, JavaScript, and web development.

PROJECTS

TabulaRAG | *Python, FastAPI, PostgreSQL, Qdrant, React, Docker, OpenAPI/MCP* Jan 2026 – Present

- Built an end-to-end tabular RAG platform for OpenWebUI that ingests CSV/TSV data and answers analytical questions with cell-level citations, enabling grounded querying without chunk-based RAG failures.
- Engineered a hybrid SQL + vector semantic search query pipeline to enable LLM use of normalized table data.
- Improved ingestion and UX responsiveness by decoupling upload from vector indexing via a concurrent background job worker and PostgreSQL bulk loading, achieving 87% faster uploads than current chunk/embed pipeline.
- Built a layered test strategy with unit, API-integration, smoke, and end-to-end tests, executed in CI on every PR and push to main to validate core ingest-to-query workflows and reduce release risk.

Campus Explorer | *TypeScript, HTML/CSS, Node.js, REST APIs, Jest, Git* Sep – Dec 2024

- Built a robust full-stack web app to query and visualize course and room datasets containing thousands of entries.
- Implemented a domain-specific query engine from EBNF grammar; supported aggregation, sorting, grouping, and nested filters with caching and persistence layers, reducing redundant computations by 60%.
- Developed a data pipeline with HTML parsing (parse5) and Google Maps geolocation API integration to provide users with estimated walk times to selected campus buildings and rooms.
- Ensured app stability and correctness via robust error handling and multi-level testing with 95%+ code coverage.

SKILLS

Programming Languages: Python, Java, JavaScript, TypeScript, C++, C#, HTML, CSS, SQL, Bash
Frameworks and Libraries: React, Express, Spring Boot, Django, Flask, scikit-learn, numPy, pandas
Databases: MongoDB, PostgreSQL, SQLite, MySQL, Firebase, Supabase, SAP HANA
Development Tools: Docker, Jasmine, Jenkins, Chrome DevTools, Vite, Gerrit, Github Actions
